Correction for 'Re-pairing DNA: binding of a ruthenium phi complex to a double mismatch' by Tayler D. Prieto Otoya et al., Chem. Sci., 2024, 15, 9096-9103, https://doi.org/10.1039/D4SC01448K.

С

The authors regret that in the published version of the paper, the letters in Fig. 2b have shifted upwards on the left-hand side. The correct version of Fig. 2, with its caption, is given herein.

G

b

blocks highlight the binding sites of the complex. (c) Image showing the large DNA bending. The overall assembly, characterised by a twofold rotational symmetry. Each asymmetric unit is made up of a DNA single strand binding a Λ -[Ru(phen)₂phi]²⁺ with occupancy 1 and a Δ - $[Ru(phen)_2phi]^{2+}$ with occupancy 0.5. The ruthenium complexes are shown in purple.

The Royal Society of Chemistry apologises for these errors and any consequent inconvenience to authors and readers.
