Block 2

Animal welfare measurement and welfare score

In the last year in the UK, 2.8 million cattle & calves, 11.5 million pigs, 14.5 million sheep and lambs and 1.16 billion chickens were used for meat production whilst 1.8 million dairy cattle were used to produce milk and 39 million laying hens used to produce eggs.

Animal welfare scientists and veterinarians have developed a method for measuring the welfare of farm animals that takes account of the extent to which the needs and wants of the animal are met and results in an overall welfare score from 0 to 100.

The score accurately represents the welfare of the animal in terms of its freedom from hunger, thirst, discomfort, pain, injury, disease, fear and distress, and the extent to which the animal can express normal behaviours and has a happy and contented life.

A score of zero denotes extreme suffering whereas a score of 100 denotes the highest level of welfare that could possibly be achieved. The method covers the entire life of the animal from birth to slaughter and involves regular independent monitoring of farms.

Currently, in the UK:

- laying hens have an average welfare score of 40/100
- meat chickens 40/100
- pigs 40/100
- beef cattle 50/100
- dairy cattle 50/100
- sheep and lambs 55/100

Assume that the government and industry agree to farm regulation to improve the welfare of farm animals in the UK to a certain welfare score. **All** animals would have to be kept at this welfare score (or higher). This higher welfare would incur additional production costs. These higher costs would result in more expensive meat, dairy and eggs and

food with these ingredients, so that everyone will have to pay more for these food products, including you.

Please choose out of the given three options below your single most preferred option. Welfare scores in red show which scores have changed in relation to the current situation.

You may find that you do not particularly like any of the given options. Nevertheless, the task is to indicate your preferred option out of the three provided. If you find Choice 2 or 3 too expensive, please choose Choice 1 which represents no change to current animal welfare levels or to your food expenditure.

Remember that you have a limited budget and that more money spent on higher welfare food products means less money for you to spend on other things.

Block 3

Suppose you could only choose one from the three options shown. Please tick the option you would choose. Numbers represent welfare scores of the animals and products

shown and the impact on your weekly food bill. Welfare scores shown in red are the only ones that change in relation to current welfare scores in each choice.
