© Guy Haworth, 2014

Acknowledgments

My respect and grateful thanks go to those who created and/or promulgated the EGTs which provided these results. They include Thomas Ströhlein, Ken Thompson, Jaap van den Herik, Sito Dekker, Bob Herschberg, Eugene Nalimov, Bob Hyatt, Lewis Stiller, Eiko Bleicher, Marc Bourzutschky, John Tamplin, Yakov Konoval, the Lomonosov team, Convecta, Ronald de Man and Grant Huntington. Andrew Kadatch provided compression software to Eugene Nalimov. The majority of the lines here were (re)generated via Marc's Nalimov-format DTC/M/Z EGTs, from the Konoval-Bourzutschky 6-man DTC EGTs or via the Convecta AQUARIUM interface to the Lomonosov 7-man DTM EGTs made available in 2013.

The authors of the EGTs used were no doubt inspired by the achievements of previous chess endgame table authors including Steven Edwards, Lars Rasmussen, Christoph Wirth, Ren Wu and Peter Karrer.

The long-exposure photograph of the Horsehead Nebula in Orion is courtesy of John Nunn who has done as much as anyone to translate the raw data of the EGTs into higher-level information. Early versions of this dataset have been reviewed by several chess endgame colleagues and my thanks also go to them, including Thomine Stolberg-Rohr who gave the name *Haworth's Law* to my conjecture about the observed exponential trend in maxDTM.

My thanks to the University of Reading which hosts this dataset item at <http://centaur.reading.ac.uk/34268/>. The dataset is evolving and I thank in advance those who will contribute their feedback and suggestions about past history or future records.

Evolution ... in addition to the occasional correction of an error/omission and improvement of the text:

- v5 KBBKN, KBNKB, KNPK(B/P), KQ(B/N/R)KQ, KR(B/N)KR, KRNKP, KPPKPP, KQRNKQN, KRBKNN, KRNPKPP, KRNPKRB and KBNNNKQ
- v6 Positions (and lines) from early work by Ströhlein, Thompson and others: K(Q/R)K, KBBKN, KQPKQ etc. Estimation of 10m maxDTM based on a least-square linear fit to the data for sub-8-man chess. Completion of the 6-man maxDTC records from Konoval data. Further annotation of some DTC lines. Addition of the 'EGT timeline'.
- v7 First DTM₅₀ data: KQKR(B/P), KBNKN, KNNKP, KPPKP, KQPKQ, KBBKNN. First DTZ₅₀' data: KQKBBP, KBBKNN, KNNKNP, KQPKRB, KRRPKQ. Annotation of 5-1m lines. Further 6/7m DTM and timeline data.

Current aims and goals ...

maxDTZ 6m P-ful wins/losses, maxDTC 7m positions/lines, and evolution of bibliography and timeline.

Introduction

This document contains a list of positions which were or are record wins or losses in some sense. The lines of play from those positions show the two sides choosing moves according to defined strategies appropriate for the metrics cited. These strategies identify the candidate moves from the available moves using two or more filters, usually one for value then another for depth. As is currently the norm, depth is measured in winner's moves although depth in ply is symmetric and necessary for best precision. For ease of reference and following the convention of the Chess Study community, the role of the winner is played by 'White'. There is a bibliography of relevant publications, most of which are cross-referenced from the text. A pgn file accompanies this document.

The extreme positions are the outposts, the Everests or Mariana Trenches of chess' state space: they should be recognised, visited and contemplated not only because they are there but because the lines from them exhibit the deepest mysteries of chess. They push the boundaries, the eventual winner sometimes having only one move to avoid a loss. They sometimes demonstrate rare phenomena including underpromotions and extraneous force after P=N or P=B (Chessgames, 2013). They are the greatest challenge to explain in chess terms.

The notation used is as follows:

Miscellaneous notation:

AUMS	Absolutely Unique Move Sequence
btm	Black to move (and similarly, <i>wtm</i> , White to move)
kmr	<i>k</i> -move rule, e.g., 50-move rule (enabling a draw claim when ply count 'is' 100)
l&w	loss and win (and similarly, <i>w&l</i> , win and loss)
MB, YK	Marc Bourzutschky, Yakov Konoval
pc	ply count, zeroed after each pawn-push and/or capture
stm	side to move (and similarly, <i>sntm</i> , side not to move)
s4m	sub-4-man, and similarly for s5m, s6m, s7m and s8m
WDL	3-valued (stm) win/draw/loss EGTs
WDL'	5-valued (stm) 50mr-win/win/draw/loss/50mr-loss EGTs (de Man, 2013)

Metrics:

DTM _(50, pc)	Depth To Mate (in the context of a 50mr and given that the ply count is <i>pc</i>)
dtm	a depth in the DTM metric
DTC	Depth To Conversion (i.e., change of force) and/or mate
DTZ	Depth To Zeroing of the ply-count (i.e., to conversion and/or pawn-push)
DTZ ₅₀	DTZ, given that 'winning lines' with phases of more than 100 plies are rated 'draw'
DTZ' ₅₀	as for DTZ ₅₀ plus depths for non 50mr-wins/losses which are ∞ mr-wins/losses
DTR	Depth by The Rule (i.e., the minimum length of a winning line's longest phase)
DTx	any or all of DTC/M/R/Z/ZR (and similarly, <i>dtx</i> is any of dtc/m ₍₅₀₎ /r/z/z ₅₀ (')/zr)
DTZR	Depth to Zeroing of the ply-count, given that minimaxing DTR is the priority.

Move-selection strategies:

S...	a move-filtering strategy
U ^m	challenge the opponent to find the unique value-preserving move
V ⁺	retain the theoretical-value of the next position
M ⁻	filter to moves which minimise DTM, and similarly for DTC/Z/Z ₅₀ /R and DTZR
M ⁺	filter to moves which maximise DTM, and similarly for DTC/Z/Z ₅₀ /R and DTZR

Move uniqueness:

- the only move available,
- ''' the only value-preserving move available (considering also ply-count re DTx₅₀ metrics),
- ''' the only move which does not allow a repetition or otherwise waste time
awarded here usually after ignoring only the reversal of the previous move,
Nunn (1992, 1994, 1995) uses '!' for both "''' and "'''.
- " (most common) the unique optimal move selected by the defined strategy, and
- ' an optimal but not uniquely optimal move.

Note that:

the strategies for a DTM-minimaxing White win are SV⁺M⁻α/SV⁺M⁺β where α/β are any other strategies:
increasingly defined α and β can decrease the choice of moves available, see e.g. KPK, and
the sets of moves available under different strategies can be identical, different or completely disjoint.

Figure 1. Endgames containing record-depth decisive positions, ‘-’ indicating ‘loser to move’.

The maxDTx loss is usually one ply more or less than the maxDTx win, but there are exceptions.¹ The following are also amongst those included in addition to the record-holders above:

interim record-holders and positions/lines of historical or game significance, requested positions/lines, and ‘n-2, like-man’ reductions of n-man force (e.g., KRNKR re KRRNKRR), maxDTM_{50, pc} and maxDTZ₅₀(‘) positions (e.g., for KNNKP, KQPQK and KBBKNN; pc = 0 or some pc) a (KQPQK) position with the greatest known dtz₅₀-dtz (= 49m/98p): dtz₅₀ = 100p is however possible, a (KRKNP) position won only by executing the longest AUMS known to the author, and best known and credible candidates for other maxDTx records.

DTM ≥ DTC ≥ DTZ; DTZ₅₀ can be ‘draw’, equal to or greater than DTZ; DTZ₅₀’ >/=< DTZ₅₀,

There are endgames with maxDTZ less than some successor phase’s maxDTZ:

KBBKNN (maxDTC/Z = 38m) usually leads to KBBKN (maxDTC/Z = 66m)

it may be sensible for the winner, ‘White’ here, to maximise rather than minimise in some metric,

e.g., in KBBKNN, SV⁺M⁻C⁺/SV⁺M⁺C⁻ given that in KBBKN, maxDTZ > 50

Endgames with maxDTZ₅₀ < maxDTZ ≤ 50: KBBKNN (maxDTZ₅₀ = 29m, maxDTZ = 38m).

DTM ≥ DTR ≥ DTZR ≥ DTZ but the creation of DTR/DTZR EGTs remains a challenge for the future:

the positions with maxDTZR need not be the position with maxDTR because ...

the maxDTZR position has the longest 1st-phase but perhaps not the longest 2nd-phase

the DTR/DTZR EGTs do not necessarily define the winning route as they give values for only pc = 0.

¹ The maxDTM 3-3m_P-ful btm loss (KRPKNN), the maxDTM 2-5m_P-less btm loss (KRBBBKQ).

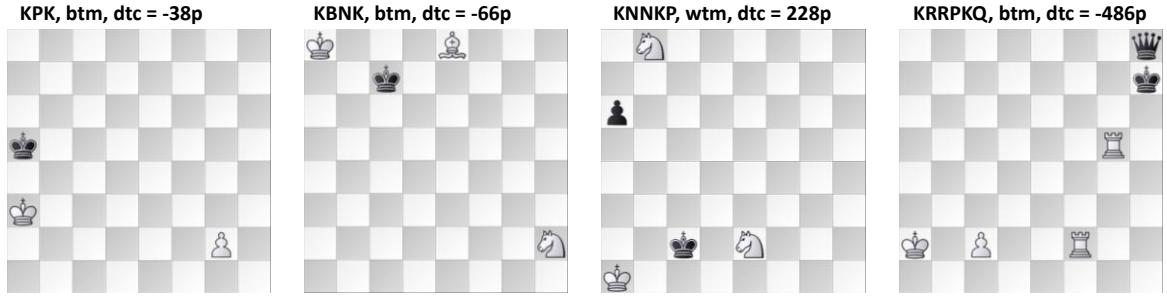

Figure 2. The 3- to 6-man maxDTC positions.

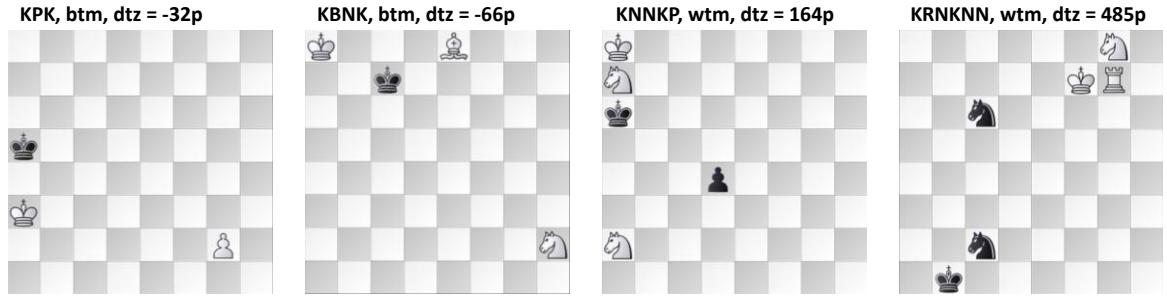

Figure 3. The 3- to 6-man maxDTZ positions.

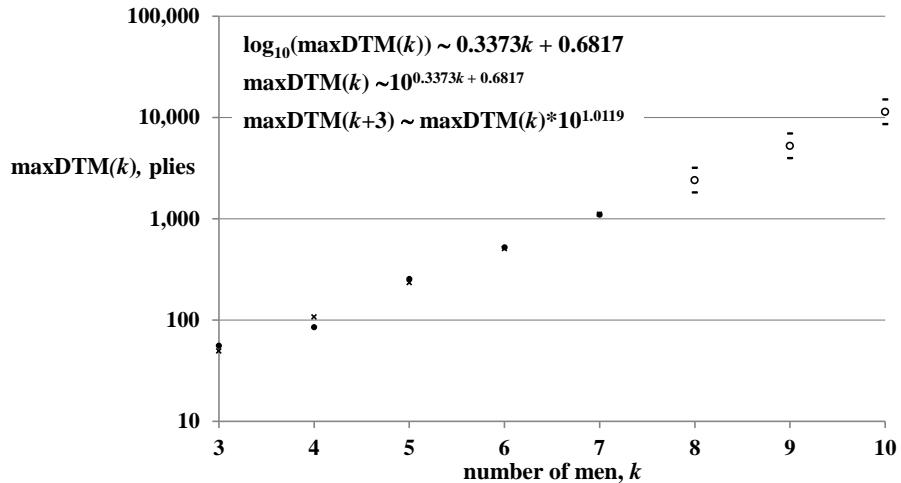

Figure 4. maxDTM v number of men: actuals, least-squares fit, predictions and 2σ confidence intervals.

The maxDTM trend from 3-man to 7-man chess suggests a quasi linear model² for $\log_{10}\text{maxDTM}$. The basic rule³ appears to be “Three more men: maxMate times ten!” The model gives a 50% probability to 8m, 9m and 10m mates in 2400^+ , 5220^+ and 11340^+ plies respectively. Its ‘ 2σ ’ 97% probability prediction is of mates in 1810^+ , 3940^+ and 8570^+ plies. It gives a 90% probability of an 8-man mate in 2000^+ plies and an 80% probability of a 10-man win in 10000^+ plies. It will be interesting to see how long this trend continues.

In a survey of the annotated moves, 11.2% were "", 1.7% were "", 70.7% were ', 14.3% were ' and 2.1% were °. Thus, only 14.3% of the positions provide metrics other than the priority one with an opportunity to filter the set of best moves further. Also, the secondary metrics tend to discriminate between moves only towards the end of game-phases so usually, e.g., the DTC and DTZ EGTs would not improve on the choice of the DTM EGT alone.

² The quadratic fit, only 6% better, gives higher predictions. The cubic/quartic fits give inappropriate and/or overfitted models.

³ Dubbed ‘Haworth’s Law’ *en passant* as it were by a visiting Thomine Stolberg-Rohr WFM.

Figure 6. Record 6-8m positions with consonant, defined strategies of play.

The first lacunae are the maxDTZ P-fu1 6m/7m entries, though there are some credible candidates for the 7m DTC/Z entries. 6-7m DTZ EGTs have not been computed yet but are more easily computed given that WDL EGTs may be derived from already-computed DTC or DTm EGTs.

EGT-generation timeline

This is evolving: additions and suggestions are welcome.

#	Date	DTC	DTM	DTM _{s₀}	DTR	DTZ	DTZ _{s₀}	DTZ _{s₀'}	DTZR	WDL	WDL'	References, notes
01	1713-11-13											(De Montmort, 1713; Kuhn, 1968; Bellhouse, 2007) de Montmort on Waldegrave's strategy for <i>Le Her</i>
02	1913											(Zermelo, 1913; Schwalbe and Walker, 2001) Zermelo's theorem
03	1928											(von Neumann, 1928) vN's proof of the minimax theorem; generalisation of concept of game Γ
04	1944											(von Neumann and Morgenstern, 1944) Zero-sum, 2-person, perfect information games are strictly determined'
05	1964											(Bellman, 1964) Dynamic Programming approach to EGT generation defined
06	1970	c	m									(Ströhlein, 1970) thesis defining minimax play; first DTC EGT's - K(Q/R)K, KQK(N/R).
07	1977	c										Thompson demonstrates the value of a KQKR EGT in two Browne-BELLE games
08	1983-07-30	c										(Roycroft, 1983) Thompson KBBKN DTC/Z EGT: s6m maxDTC/Z \rightarrow 132p
09	1984-08		m									(Dekker and van den Herik, 1984) BKNK EGT
10	1986-09-30	c			z							(Thompson, 1986) DTC EGT for KQKBB and DTZ EGT's for KQPKQ and KRPKR
11	1987-04		m		z							(Dekker et al, 1989) KNNKP(h) DTM EGT: s6m maxDTM \rightarrow 229p
12	1991-06	c			z							(Stiller, 1991) KRBKN DTC EGT: s7m maxDTC/Z \rightarrow 445p
13	1991-3	c										Thompson publishes 5mDTC EGT's on CDs
14	1995	c										(Stiller, 1995) Stiller Ph.D. thesis: 5- and 6-man DTC EGT's: s7m maxDTC \rightarrow 485p (KRNKNN)
15	1999	c	m									Nalimov 5m DTM and Wirth 5m DTC EGT's completed - maybe earlier
16	2000	c										Thompson's 64 P-less 6m DTC EGT's
17	2000-03		r		zr							(Haworth, 2000a/b) Concepts of DTR, Depth by the Rule, and DTZR defined
18	2004-09-11		m									Nalimov completes his 4-2m DTM EGT's with KPPPKP; s7m maxDTM \rightarrow 506p
19	2005-04-12	c										(Bourzutschky, 2005; Krabbé, 2005a) First 7m EGT (KNNNNKQ): 7m maxDTC \rightarrow 169p
20	2005-08-09		m									Nalimov completes his s7m DTM EGT's with KPPKPP; s7m maxDTM = 523p
21	2005-09-06	c										(Krabbé, 2005b; Bourzutschky and Konoval, 2006) 7m maxDTC \rightarrow 451p (KRBKNKR)
22	2005-10-17	c										(Krabbé, 2005c; Bourzutschky and Konoval, 2006) s8m maxDTC \rightarrow 579p (KRRNKRR)
23	2006-03-31	c										(Krabbé, 2006a) Max known s8m DTC \rightarrow 660p (KQBANKQB)
24	2006-05-26	c										(Krabbé, 2006b) Max known s8m DTC \rightarrow 1,034p (KQNKRBN)
25	2006-07		v									SHREDDER Bitbases introduced with SHREDDER 10
26	2006-08-08		m									Last 16' Nalimov 3-3m DTM EGT's sent to Nelson Hernandez and promulgated
27	2011	c										(Bourzutschky and Konoval, 2011) First 8m EGT (KBBBBKRR): 8m maxDTC \rightarrow 127p
28	2012-07-30		m									(MVL team, 2012) Completion of the 4-3m DTM EGT's
29	2012-08-27		m									(MVL team, 2012) Completion of the 5-2m DTM EGT's
30	2012-12-14		m									(MVL team, 2012; Krabbé, 2014) s8m maxDTM = 1,097p with KQPKRBN 1-0 win
31	2012-12		m									(MVL team, 2012) First web-access to MVL's DTM EGT's
32	2013-03		m									(MVL team, 2012) Web-access to 50TB of MVL DTM EGT's
33	2013-04-01			z ₅₀	v ₅₀							(de Man, 2013) syzygy s7m WDL ₋₅₀ and DTZ ₋₅₀ ' EGTs, recognising the FIDE 50m-rule
34	2013-12-31			m ₅₀								(Huntington, 2013) DTM ₅₀ EGTs: maxDTM ₅₀ > maxDTM for KNNKP, KQPKQ and < for KBBKN

Figure 7. A timeline for the generation of endgame tables.
