6-man Chess and Zugzwangs

Guy Haworth

guy.haworth@bnc.oxon.org

Topics

- Endgame tables, EGTs
- The Zugzwang: derivation, definition(s), levels, types, examples
- The en passant zugzwang
- The Zugzwang review: listing, counting, statistics
- Some gems:
 - > deepest zugs, unique zugs, e.p. zugs, type 4-6 zugs, 5-1p zugs
 - > Adding castling rights: cancels zug, no difference, creates zug
- Zugzwangs in Studies
- Challenges for the future

Endgame Tables

- Chess is a sequence of (partially) ordered phases: ∴ EGTs possible
 - KQP(a6)KQ KQP(a7)KQ KQQKQ KQQK KQK
- Nalimov's 'Depth to Mate' (DTM) EGTs are well known
 - > 3- to 5-man and some 6-man EGTs purchasable from, e.g., Chessbase
 - > Being shared on p2p networks, e.g. emule, kd.lab.nig.ac.jp/chess/tablebases-online/
 - > Bleicher and Tamplin provide EGT Query Services
 - www.k4it.de/index.php?topic=egtb&lang=en, chess.jaet.org/endings/
- DTM EGTs assume winner is minimising, and loser maximising, DTM
- Other metrics exist: DT Conversion, DT (move-count) Zeroing (move)
- Yakov Konoval's algorithm (run by Marc B) and code are faster
 - KQPKQ can be generated in 10 minutes on a single processor

The Zugzwang

- Zugzwang ... 'pressure to take action', hence in chess ...
- Definition: a position where the side to move would rather 'pass'
- However, the Oxford Companion to Chess says:
 - ➢ 'A position in which whoever has the move would obtain a worse result than if it were the opponent's turn to play'
 - > 'whoever' suggests that either side can be considered 'on move'
- Proposed redefinition of a Zugzwang Position:
 - > One in which the side to move would rather play a *Null Move*
 - > Anticipates the case when position *p1* includes possible *e.p. capture*
- Levels of Zugzwang: A, B, C

Levels and Types of Zugzwang

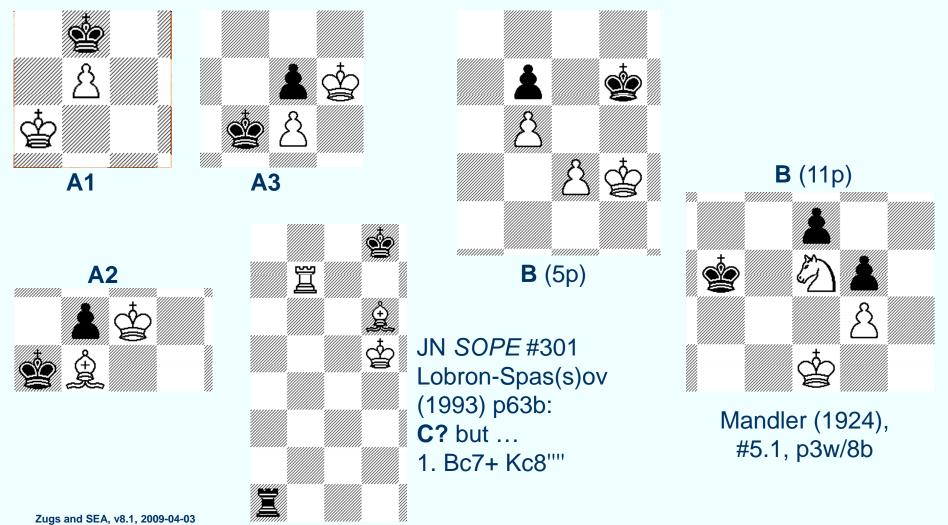

Levels of Zugzwang:

- > A: -ve impact on theoretical value
- ightharpoonup B: -ve impact on number of moves to some 'win goal' (\Rightarrow e.g. \triangle)
- > C: -ve impact on prospects of a better result

Nomenclature:

- \triangleright 'Before' $A \equiv Reciprocal Zug, <math>B \equiv Squeeze$
- ightharpoonup 'After'? A = Strong Zug, B = Weak Zug, C = ? ... Bronze
- Focus here on Level A Zugs: three familiar types
 - type 1: 1st player draws wins draws (121)
 - > type 2: 1st player loses draws loses (010)
 - > type 3: 1st players loses wins draw (020), the full point zug

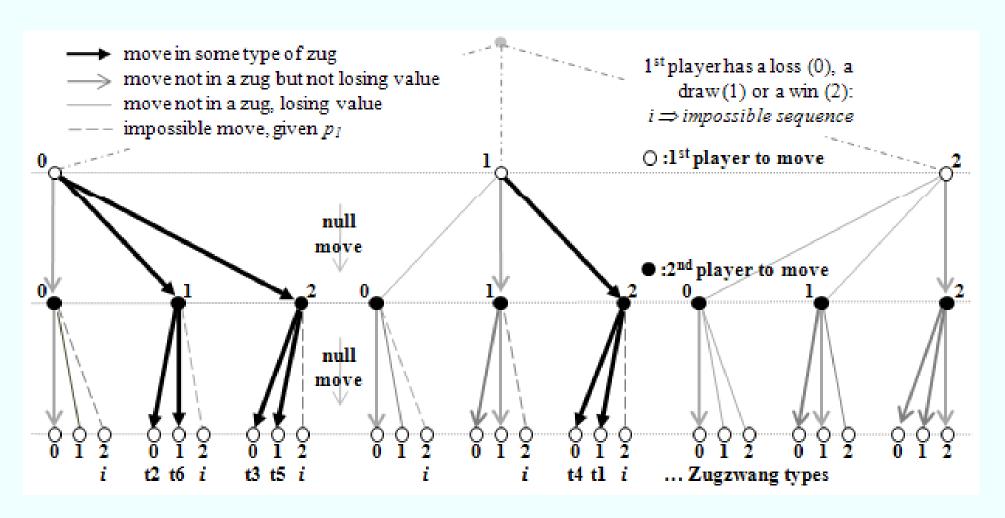

Examples of Level A1-A3, B and (?) C zugs

The en passant zugzwang

- Who first documented en passant featuring in a zug?
 - > ? Elkies, On Numbers and Endgames. In GONC (1996)
 - > Not visible to GH (2000) in a review of received positions
- Given the zug's positions p1, p2 and p3 and an e.p. option in p1:
 - position p2 does not feature e.p., position p3 =/= position p1
 - > to the 1st player, value(p3) may be <, = or > value(p1)
 - \rightarrow If value(p3) = value(p1), value(p3) < value(p2) ...
 - this implies that the en passant capture option is not essential to the zug
 - ➤ Beyond the three previous types in which value(p3) = value(p1) ...
 Three further types of zugzwang exist

Six types of zugzwang

Listing and counting zugs

- The lexical convention is that:
 - ➤ White has at least as many pieces as Black
 - > Pieces are listed in 'strength order': K-Q-R-B-N-P
 - ➤ In an *m-m* endgame, White is 'lexically no less strong' than Black
 - > Endgames are listed alphabetically within group (maybe P-less/P)
- 1st player may be assumed to be White unless e.p. is present
- When the endgame force present is symmetric, e.g. KPKP:
 - > type 2 zugs are equivalent to type 1 zugs (taking p2 as p1 etc)
 - most type 3 zugs pair off into pairs of equivalent positions
 - Only one of these is counted
- No attempt is made to identify positions which are unreachable
- No check is made on whether an e.p.-capture is legal or not
- Statistics and zuglists en route to the ICGA website www.icga.org

Headline Statistics

Some observations on e.p. zugs

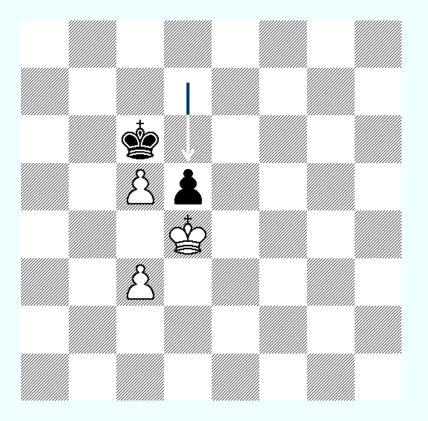

- Given the naming convention, Black may be 1st player
- The three new Types:
 - > type 4: 1st player draws wins loses (120)
 - Not a good idea to play the null move in this position
 - > type 5: 1st player loses wins draws (with stalemate) (021)
 - the only zugzwang in which the 1st player makes a net gain
 - > type 6: 1st player loses draws draws (with stalemate) (011)
- In terms of just p1/p2, $t4 \rightarrow t1$, $t5 \rightarrow t3$ and $t6 \rightarrow t2$
- Apart from 393 type 4, we have 1 type 4 and 2 type 6 zugs
- Elkies has provided an 11-man, 9-pawn type 5 zug: KP⁵KP⁴
- Is a position with an unusable e.p. capture opportunity different?

2009-02-10: FIDE Article 9.2 ... ??

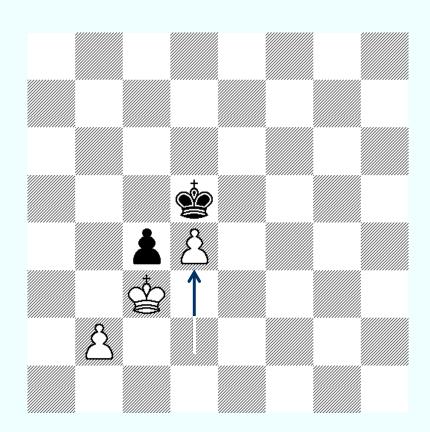

- **9.2** The game is drawn, upon a correct claim by the player having the move, when the same position, for at least the third time (not necessarily by a repetition of moves)
 - **a.** is about to appear, if he first writes his move on his scoresheet and declares to the arbiter his intention to make this move, or
 - **b.** has just appeared, and the player claiming the draw has the move.
 - Positions as in (a) and (b) are considered the same, if the same player has the move, pieces of the same kind and colour occupy the same squares, and the **possible moves** of all the pieces of both players are the same.
 - Positions are not the same if a pawn that could have been captured en passant can no longer be captured in this manner. When a king or a rook is forced to move, it will lose its castling rights, if any, only after it is moved.

But Articles 6.10, 7.4, 9.6 and B3.c use the phrase possible series of legal moves!

Two types of (e.p.) zugzwang in KPPKP

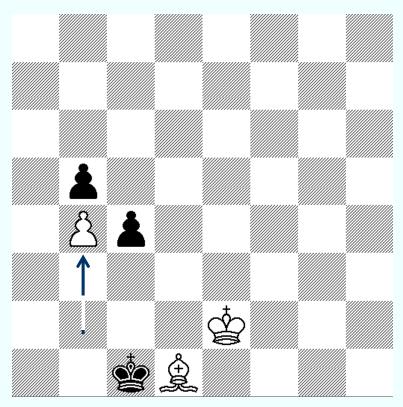

t1 (121) wtm KPPKP zug (e.p. or not)

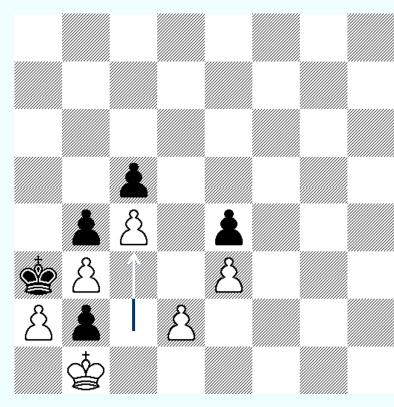

t2 (010) btm KPPKP zug (e.p. or not) dtm = -25 with e.p., -15 without

Unique type 4 and type 5 zugs

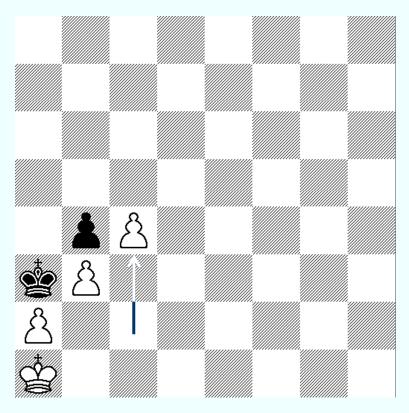

t4 (120) btm KBPKPP zug

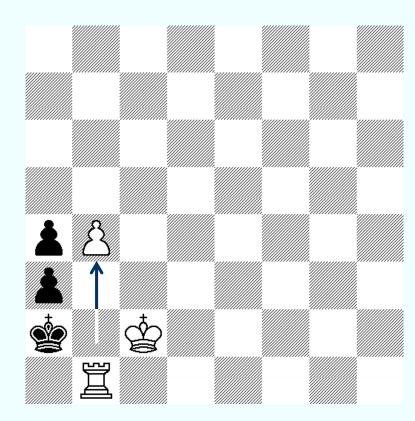

t5 (021) btm KP⁵KP⁴ zug ... NDE

The two known type 6 zugs

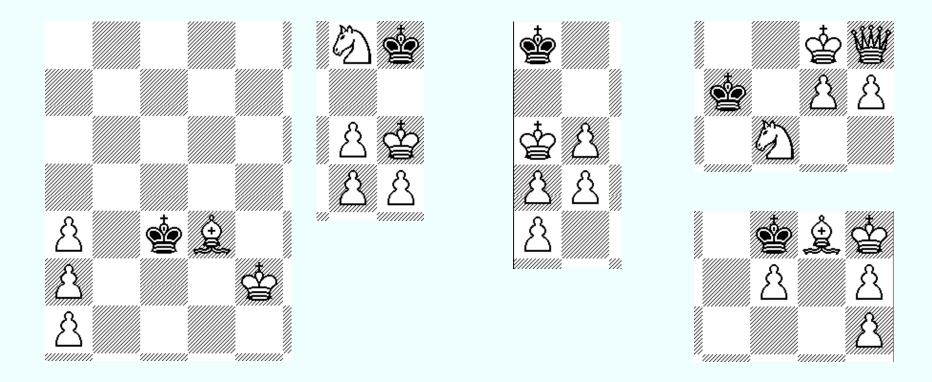

t6 (011) btm KPPPKP zug

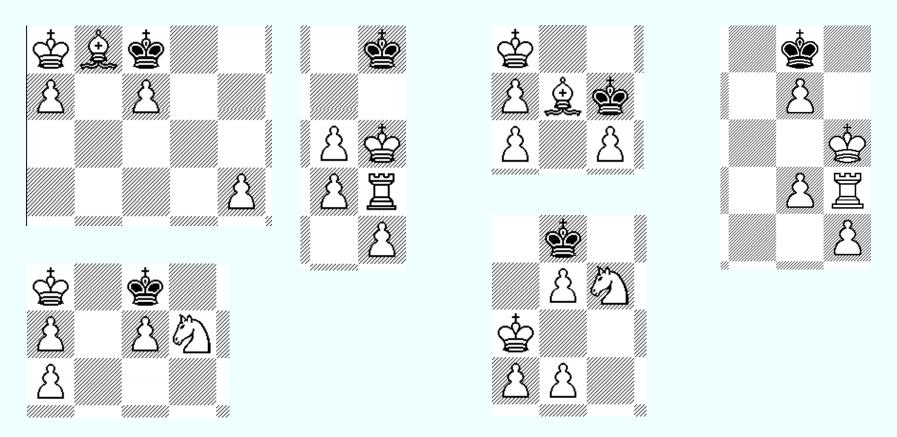

t6 (011) btm KRPKPP zug

5-1p zugzwangs, Part 1

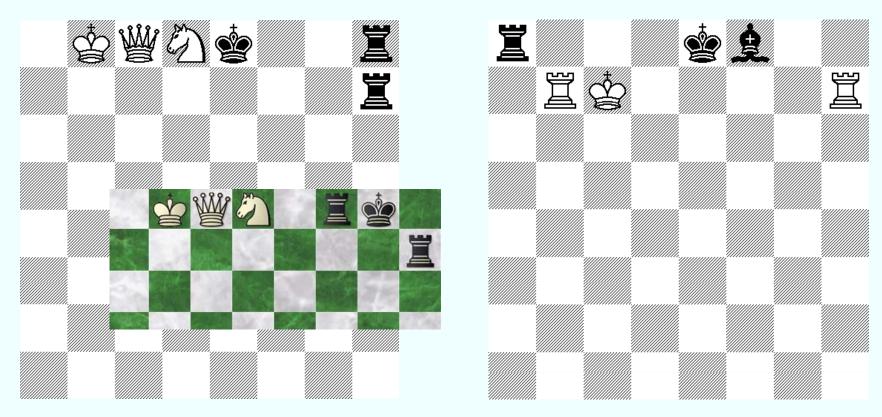

293 (type 1) 5-1p zugs in 7 endgames: K(B/N/P/R)PPK and K(Q/R/B)NPPK ** 174 = 3*58 'wrong footed Knight' zugs; (unavoidable) stalemates

5-1p zugzwangs, Part 2

Counts: KBPPPK (11), KNPPPK (89), KPPPPK (17), KRPPPK (2); KBNPPK (58), KQNPPK (58), KRNPPK (58) – Knight's tours?

Added Castling Rights ... 1.6% of R-positions

t1 (121) wtm KQNKRR zug (but 1...O-O draws)

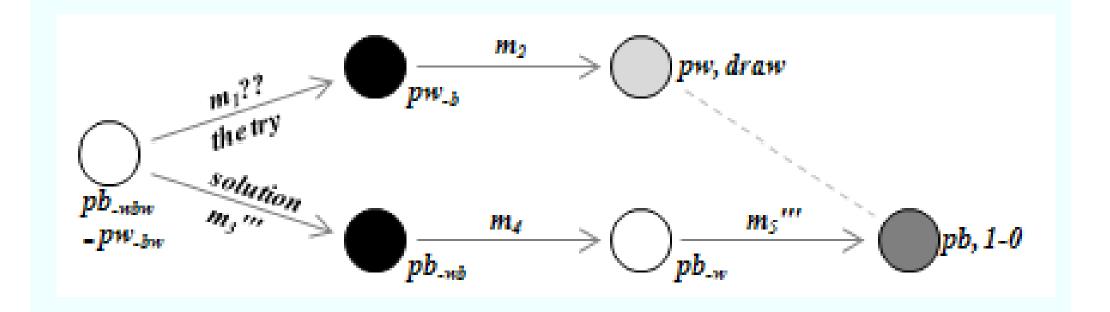

t1 (121) wtm KRRKRB zug 1. ... B(a3/c5/e7) 2. Rh8 Bf8

Added castling rights does not reduce theoretical value for the beneficiary

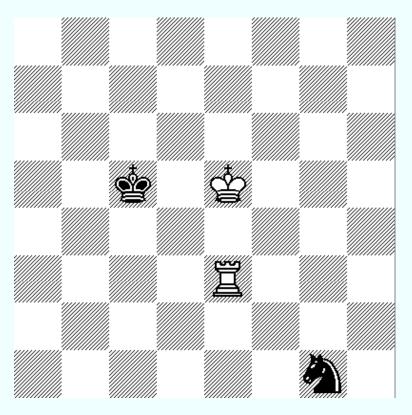

Zugzwangs in Studies ... and Aesthetics

- Review level A zugs in the study corpus
- Identify all 'Reciprocal zugzwang studies'
 - ➤ John Beasley, *Creating reciprocal zugzwang studies*. EBUR 12-2, 8—12 (2000)
 - > Level A zugs featuring in both the main line and a plausible try
- Identify Level B zugs in EGTs and in the study corpus
 - Level B zug featuring twice in the main line
 - > wtm position BZ has to lead to btm position BZ for the win
- Identify a Level C zug, given a model of a fallible player
- Aesthetics of zugzwangs?
 - Factors of the position?
 - > Factors of the context (clearly relevant) ?

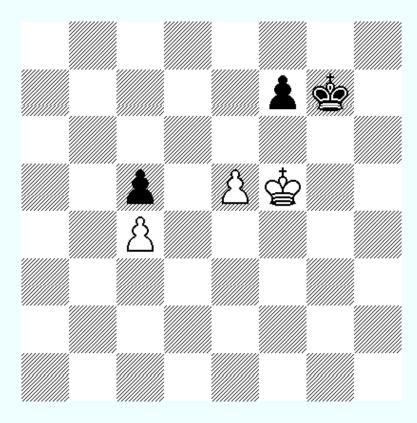

(Reciprocal) Zugzwang Studies

JB: Zugzwangs in 'Zugzwang Studies'

JB, EBUR #2
1. Kf5' (1. Kf4?? Kd4 pw=) Kd4'
2. Kf4'''' pb 1-0

JB, EBUR #4
1. Kf4"" (1. Ke4?? Kg6" pw=) Kg6'
2. Ke4"" pb 1-0

Zugzwang Challenges

Statistical

- > Review the YK/MB 'DTC' zugzwang results
- > Generate and review EGTs for positions with castling rights

Datamining for Gems

- > a type 3 7-man zug with no Pawns, Knights or obtrusive force
- > type 3 e.p. and type 5 zugs with less men and/or less Pawns
- A zug where the presence of castling rights is key to the zug
- > Find *Knight's Tour* crocodiles of 3-1p and 5-1p zugs

Studies

- > Identify Level A and B zugs in the existing study corpus
- Identify which Level A and B zugs could be central to studies

Spare
